

# HAARP

The tool to cause Earth quake, flood and-----

Nusrat Mirza

In New York Times two articles were published; one on 8<sup>th</sup> December 1915 and the other on 22<sup>nd</sup> September 1940 profiling Nikola Tesla, a giant in the annals of Conspiratorial History. Tesla, a brilliant inventor and contemporary of Edison, developed hundreds of patents during his lifetime.

Tesla's more well-known patents, a transmitter that would "project electrical energy in any amount to any distance and apply it for innumerable purposes, both in war and peace.". Of course, mainstream science has never fully acknowledged Tesla's contributions, and was blamed that he had developed a technology that could split the earth asunder.

However, American Government did assign to Pentagon to work on this theory; later given the name of HAARP technology (High Frequency Active Aural Research Program). It was further elaborated by scientist Eastlund in whose name the patent has been registered.

HAARP is the Pentagon's provocative plan to superheat the earth's ionosphere and creating enormous amount of rain to cause flood, to generate earth quake playing with the earth plates and develop Tsunami controlling the ocean waves, or melting the engine of a aero plane.

The HAARP phased-array transmitter zaps the earth's ionosphere with high-frequency radio waves with the help of 180 towers of 70 meter height. In an Arctic compound 200 miles east of Anchorage, Alaska, the Pentagon has erected a powerful transmitter designed to beam more than a gigawatt of energy into the upper reaches of the atmosphere.

Known as Project HAARP, the \$30 million experiment involves the world's largest "ionospheric heater," a prototype device designed to zap the skies hundreds of miles above the earth with high-frequency radio waves. With this technology American Navy and Air force also benefited as it was a new

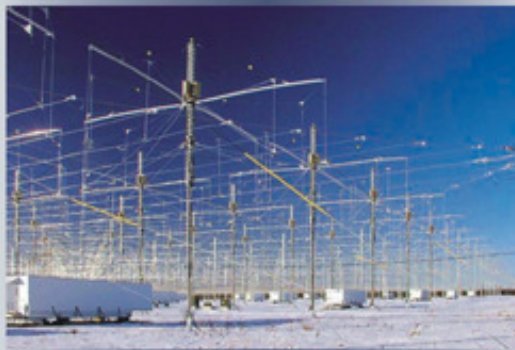

forms of communications and surveillance technologies that will enable the military to send signals to nuclear submarines and to peer deep underground.

However, a series of patents owned by the defense contractor managing the HAARP project suggests that the Pentagon might indeed have more ambitious designs. In fact, one of those patents was classified by the Navy for several years during the 1980s.

The key document in the bunch is U.S. Patent number 4,686,605, considered by HAARP critics to be the "smoking Raygun.". In the patent it is described to be a fantastic offensive and defensive weapon that would do any megalomaniacal James Bond super villain proud.

## The military says the HAARP system could:

- Give the military a tool to replace the electromagnetic pulse effect of atmospheric thermonuclear devices (still considered a viable option by the military through at least 1986)
- Replace the huge Extremely Low Frequency (ELF) submarine communication system operating in Michigan and Wisconsin with a new and more compact technology
- Be used to replace the over-the-horizon radar system that was once planned for the current location of HAARP, with a more flexible and accurate system
- Provide a way to wipe out communications over an extremely large area, while keeping the military's own communications systems working
- Provide a wide area earth-penetrating tomography which, if combined with the computing abilities of EMASS and Cray computers, would make it possible to verify many

parts of nuclear nonproliferation and peace agreements

- Be a tool for geophysical probing to find oil, gas and mineral deposits over a large area
- Be used to detect incoming low-level planes and cruise missiles, making other technologies obsolete

The above system has been discussed by two scientists Dr. Nick Begich and Jeane Manning in their book, *Angels Don't Play This HAARP: Advances in Tesla Technology*, has 230 pages with 350 footnoted sources.

The harm to mankind through played down by the American government but not surprisingly, fringe science and conspiracy theory have made Tesla something of a patron saint.

Whenever, talk radio buzz or Internet discussion turns to alleged government experiments to cause earthquakes or modify weather, references to government-suppressed "Tesla Technology" are sure to follow.

According to this book HAARP is an advanced model of an "ionospheric heater." (The ionosphere is the electrically-charged sphere surrounding Earth's upper atmosphere. It ranges between 40 to 60 miles above the surface of the Earth.)

Put simply, the apparatus for HAARP is a reversal of a radio telescope; antenna sends out signals instead of receiving. HAARP is the test run for a super-powerful radio wave-beaming technology that lifts areas of the ionosphere by focusing a beam and heating those areas. Electromagnetic waves then bounce back onto earth and penetrate everything -- living and dead. Some Americans have blamed it to be global vandalism.

Because as per the patent text, the physicist's "method and apparatus for altering a region in the earth's atmosphere" would also: "cause confusion of or interference with or even complete disruption of guidance systems employed by even the most sophisticated of airplanes and missiles"; "not only... interfere with third-party communications, but [also] take advantage of one or more such beams to carry out a communications network at the same time.

Put another way, what is used to disrupt another's communications can be employed by one knowledgeable of this invention as a communications network at the same time"; "pick up communication signals of others for intelligence purposes"; facilitate "missile or aircraft destruction, deflection, or confusion" by lifting large regions of the atmosphere "to an unexpectedly high altitude so that missiles encounter unexpected and unplanned drag forces with resultant destruction or deflection of same.

This weapon is part of star war program, however, this goes beyond the usual Star Wars prescriptions of the day and suggested even more unusual uses for his patented ionospheric heater.

"Weather modification," the patent states, "is possible by... altering upper atmospheric wind patterns or altering solar absorption patterns by constructing one or more plumes of

particles which will act as a lens or focusing device." As a result, an artificially heated could focus a "vast amount of sunlight on selected portions of the earth."

Judging from the APTI (ARCO Power Technologies Incorporated) patent, named with Eastlund Scientist, Tesla was a major inspiration for Eastlund ionospheric heater. The first New York Times article, dated September 22, 1940, reports that Tesla, then 84 years old, "stands ready to divulge to the United States Government the secret of his 'teleforce,' with which, he said, airplane motors would be melted at a distance of 250 miles, so that an invisible Chinese Wall of Defense would be built around the country." Quoting Tesla, the Times story continues:

"This new type of force, Mr. Tesla said, would operate through a beam one hundred-millionth of a square centimeter in diameter, and could be generated from a special plant that would cost no more than \$2,000,000 and would take only about three months to construct."

Taking this in to consideration, American arrogance is not baseless; Zbigniew Brzezinski, the security advisor to carter

administration has said in the preface of his book *THE GRAND CHESS BOARD* that America would like keep the centre of Power of the world as long as possible and would not allow any country or group countries to emerge to challenge the primacy of United States of America.

A book *Angels Don't Play This HAARP*, quotes Zbigniew Brzezinski predicting as early as 1970, a "more controlled and directed society" would gradually appear, linked to technology. This society would be dominated by an elite group which impresses voters by allegedly superior scientific know-how. Brzezinski further quotes:

"Unhindered by the restraints of traditional liberal values, this elite would not hesitate to achieve its political ends by using the latest modern techniques for influencing public behavior and keeping society under close surveillance and control. Technical and scientific

momentum would then feed on the situation it exploits," Brzezinski predicted.

His forecasts proved accurate. Today, a number of new tools for the "elite" are emerging, and the temptation to use those increases steadily. The policies to permit the tools to be used are already in place. How could the United States be changed, bit by bit, into the predicted highly-controlled techno society? Among the "steppingstones" Brzezinski expected were persisting social crises and use of the mass media to gain the public's confidence.

In another document prepared by the government, the U.S. Air Force claims: "The potential applications of artificial electromagnetic fields are wide-ranging and can be used in many military or quasi-military situations... Some of these potential uses include dealing with terrorist groups, crowd control, controlling breaches of security at military installations, and antipersonnel techniques in tactical warfare. In all of these cases the EM (electromagnetic) systems would be used to produce mild to severe physiological disruption or perceptual distortion or disorientation.

In addition, the ability of individuals to function could be degraded to such a point that they would be combating ineffective. Another advantage of electromagnetic systems is that they can provide coverage over large areas with a single system.

They are silent and countermeasures to them may be difficult to develop... One last area where electromagnetic radiation may prove of some value is in enhancing abilities of individuals for anomalous phenomena."

With this, what one can imagine of the recent floods in Pakistan, the 2005 earthquake, the Tsunami and the plane crashes the air chief and air blue flight passing near by the Marriott Hotel? Are they doing first experiments to teach how to behave with those who are more knowledgeable? Or they taming to be their slaves?
